To Whoever It May Concern,

I'm writing to recommend Nikhil Shrivastava, who interned as a Frontend Engineer at Spike (a product of FatSync Software pvt ltd) from December 2025 to March 2026.

Nikhil's primary project was building a new onboarding flow for Spike, implementing the onboarding experience end to end based on new designs. It's not a trivial task for an intern; it requires understanding the product deeply and shipping production-quality work.

What stood out most about Nikhil was how he operated as a communicator. He kept the team informed by posting regular progress updates in our shared channel, which meant we always had visibility into his work without needing to follow up. When he ran into blockers, he came prepared and clearly described the problem, what he'd already tried, and what he needed. This made unblocking him fast and efficient. That kind of async communication discipline is rare, even among experienced engineers.

Beyond communication, Nikhil was self-directed and proactive. He didn't need hand-holding or constant supervision. He took ownership of his work and saw it through.

I'd confidently recommend Nikhil for any engineering role. He brings solid technical ability alongside strong professional habits that make him genuinely easy to work with.

Damanpreet Singh

Founding Engineer, Spike
